

BUG REPORT: embedding external content via xrefs

Jan David Fischbach

Abstract

A small demo embedding external content via xref. The content should be present in web and pdf exports, however it appears only in web.

1. DIRECTLY WITH THE INLINE SYNTAX
2. PASSING THE REFERENCE TO THE FIGURE DIRECTIVE

```
import matplotlib.pyplot as plt
fig, ax = plt.subplots()
ax.scatter("Horsepower", "Miles_per_Gallon",
          c="Acceleration", data=data.cars())
_ = ax.set(xlabel="Horsepower", ylabel="Miles per gallon",
          title="Horsepower and miles per gallon")
```

Figure 1: A matplotlib image of the cars data from the myst guide

3. SAME FOR INTERNAL REFERENCE

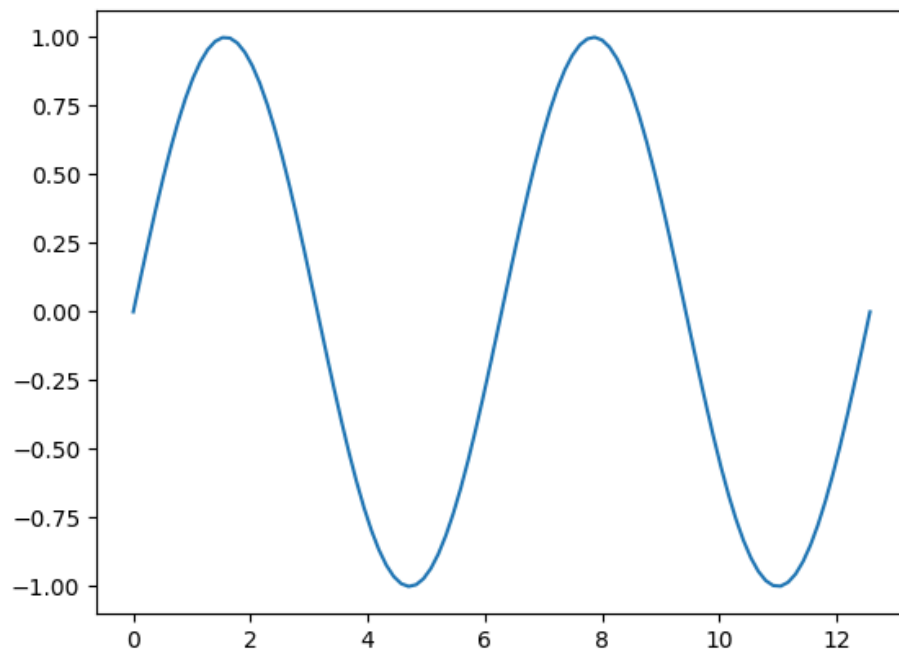

Figure 2: This is a sine wave, from a different document in the same project
